How to activate licenses in MatCalc!

(MatCalc 6.00.1000)

MatCalc licenses - Overview

The new MatCalc 6 offers various licensing options to meet exactly your needs.

The following licenses are available:

Persistent licenses

- Single-User-Single-Node licenses

- Multi-User-Multi-Node licenses

Transient licenses

- Network licenses

MatCalc licenses - Overview

Persistent licenses

Persistent licenses have to interact with our main license activation server (*activation.mceng.at:60100*) at least once to be activated for a particular computer.

Transient licenses

Transient (network) licenses are licenses that can be temporarily activated and which are deactivated automatically after prolonged non-use. Network licenses require the installation of a local server to manage the regular activations and deactivations of the license. They are characterized by a subnetwork address in which they are valid, and a maximum number of concurrent users. Within the given subnetwork, any computer that has MatCalc installed and is able to connect to the local server can use MatCalc.
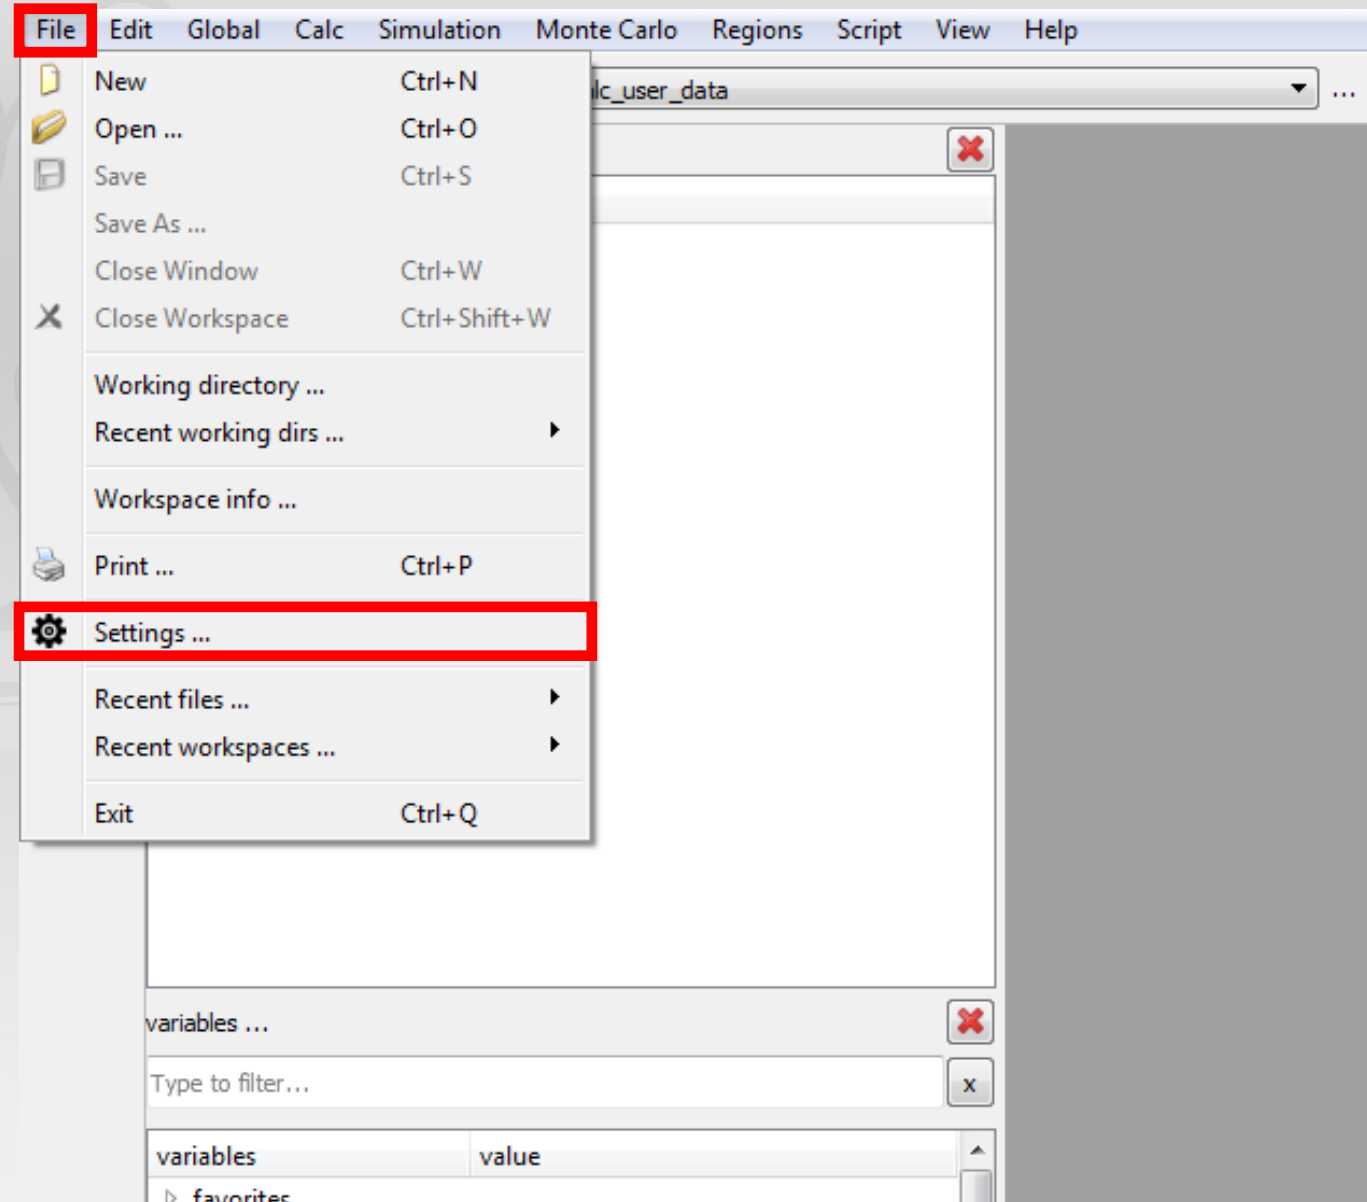

Activation of **Persistent licenses** (Single-User-Single-Node / Multi-User-Multi-Node licenses)

Activation of Persistent licenses

- Download the license file from the MatCalc Engineering GmbH customer portal: https://customers.matcalc-engineering.com

- Move the corresponding license file into your "matcalc_user_data/licenses/*" directory that you have created or selected before.
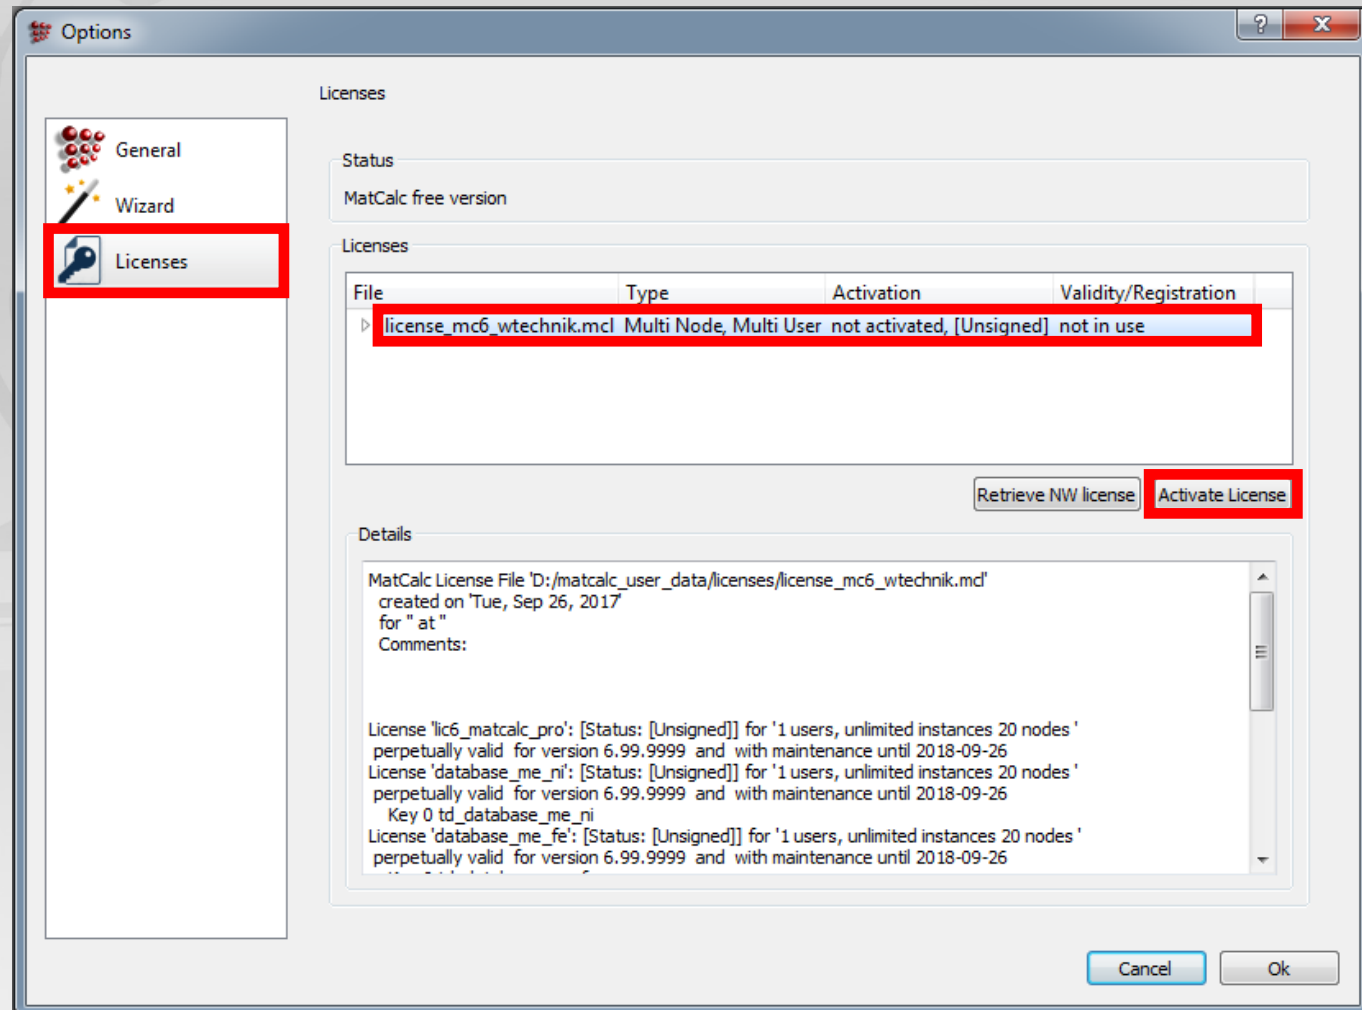

Activation of Persistent licenses

- Close and restart MatCalc

- Open the "File"-menu

- Click on "Settings"
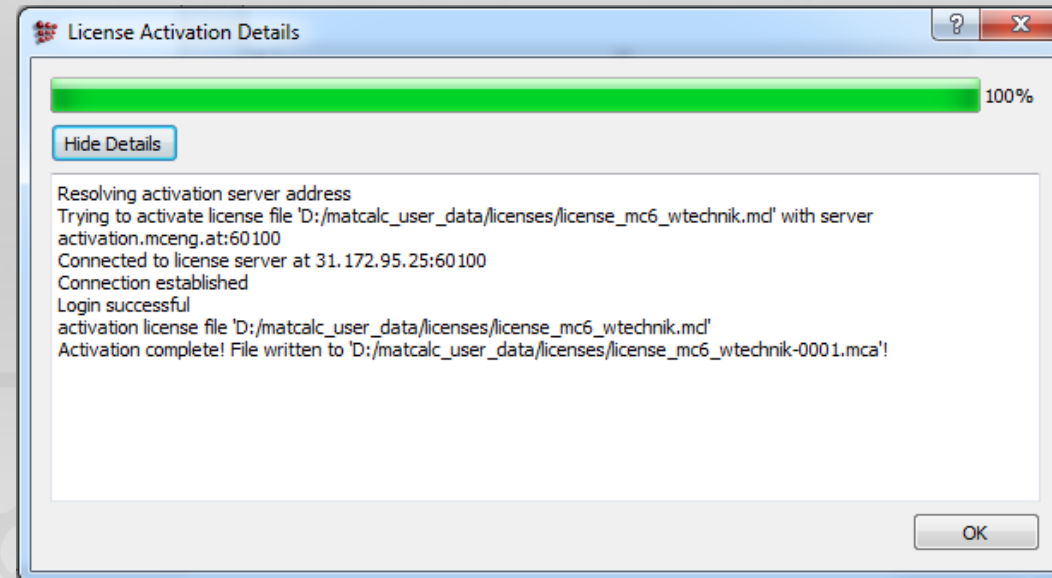

Activation of Persistent licenses

- Click on "Licenses" in the "Options" window

- Select the license file, which you want to activate

- Press the "Activate License" button

Activation of Persistent licenses

- Activation process is started

- Activation is complete and the activation file is written

- Have fun...

License Activation Details
